ENGINEERING

- Languages**
TypeScript · Python · Rust · JavaScript
· Shell
- Systems**
Agent verification · P2P networking ·
quantitative infrastructure
- Tools**
React · FastAPI · Tokio · Raylib ·
Playwright · GitHub Actions

CORE INTERESTS

Programming languages,
operating systems and artificial
intelligence.

WORKING STYLE

Evidence-minded, deeply
focused and collaborative.
Values belonging to a team as
much as solving the technical
problem.

CURRICULUM VITAE · JULY 2026

Yusuf
Karaca

Systems & AI Tooling Engineer

Software engineer with eight years of hands-on interest in building and understanding complex systems. Current work spans agentic verification, autonomous improvement loops, quantitative trading infrastructure and peer-to-peer software. Open to software roles in Germany and remote teams.

SELECTED PROJECTS

PRAXIS Local truth kernel for coding agents, with acceptance criteria, deterministic gates, tamper-evident evidence and Ed25519-signed verification receipts.	TypeScript Python SDK
Hephaestus Reusable, hypothesis-driven autonomous improvement loop with an adversarial council and evidence-gated verification through PRAXIS.	TypeScript Python · Shell
V7 Engine Contract-bounded quantitative trading monorepo covering simulation, alpha discovery, policy critique, runtime execution and operator UI.	Python TypeScript
Raycord Peer-to-peer Rust desktop chat with Ed25519 identity, UDP LAN discovery and gossip-style message/media synchronization over TCP.	Rust Tokio · Raylib
DesignForge AI design intelligence engine that turns a URL and brief into an auditable redesign blueprint using visual retrieval and motion planning.	JavaScript Playwright
